mateco IT – Google Cloud Product Owner

We're looking for a Google Cloud Product Owner. Are you the one?

First of all, what does a Cloud PO do at mateco IT?

As a Product Owner (PO) of our Google Cloud team, you will be responsible to manage the backlog of the team. The Google Cloud team is responsible to set-up and maintain shared cloud infrastructure, applications, and tooling within the IT organization of mateco. As PO you will define what the team will be working on by creating the tasks in Jira and define the priorities of those tasks based on input you get from the different stakeholders (software development teams, management, security team, the cloud engineers in the Google Cloud Team...). You will be the single point of contact for this team, and will be handling the short- and longterm planning.

Good. So what does that mean in detail?

- You capture feedback/input from stakeholders (dev teams, other product owners, security-team...) to capture their requirements/needs regarding Google Cloud infrastructure

- You translate these requirements to backlog items for the Google Cloud team

- You define the priorities of these backlog items based on the high-level company priorities

- You prepare and lead the refinement & planning meetings

- You collaborate with the product owners of the software development-teams (eg: you attend the weekly PO-sync)

- You take initiative to improve the cloud infrastructure & tools and suggest improvements

- You actively contribute to the work of the team as one of the cloud engineers

- You will provide clear guidelines, directives, and documentation on cloud infrastructure and cloud-native development taking into account security, maintainability, usability, and budget.

- You will actively support and coach software delivery teams to become Cloud Native DevOps teams that know how to leverage the possibilities of the cloud and autonomously run the software they build.

- You will stay on top of new technological evolutions and innovations in order to be and remain the expert in cloud infrastructure-related topics.

Ok. And what exactly would make you the perfect fit for this?

- You are proactive and reach out to people to get things done

- You have at least 4 years of experience with GCP

- You have a very good understanding of software development and CI/CD.

- You want to combine your technical skills with the responsibilities of a Product Owner

- You take initiative

- You're a team player

- You are fluent in English and Dutch

Still sounds good? This is what we have to offer you.

- A big and modern IT environment with **lots of opportunities** to learn and contribute.

- **You will stay on top of your game** and you will be able to **take initiative and make a difference**.

- We offer a working culture built on **autonomy and mutual trust and respect.**

- Lots of flexibility: flexible hours and the ability to **work from home 2 days a week.**

- We offer an **attractive salary package** including a company car and numerous fringe benefits.

- A brand new office in Waregem to **work together with your team**

Alright, convinced you are the one?
